

December 18, 2008

Quest Software has successfully tested Space Manager with LiveReorg 6.7.0 for compliance with the Office of Management and Budget (OMB) security requirements for Federal Desktop Core Configuration (FDCC) compatibility for Microsoft Windows Vista.

The results of these tests demonstrate that in each instance, the FDCC reference image remained 100% compliant with the security configuration tests represented in the National Institute of Standards and Technology (NIST) Security Content Automation Protocol (SCAP) data streams.

More specifically, our testing determined that the standard installation, operation, and un-installation of Space Manager with LiveReorg 6.7.0 does not alter the configuration settings from the current approved FDCC configuration.

Finally, it has been verified that Space Manager with LiveReorg 6.7.0 runs in the standard user context without requiring elevated system administration privileges.

We utilized the NIST validated C5 Compliance Platform from Secure Elements to conduct our SCAP testing and certification. The following three FDCC scans were run and returned with a 100% compliance score:

- Guidance for Securing Microsoft Windows Vista Systems for IT Professional - Corrected (Version 1.0.5)
- Guidance for Securing Microsoft Windows Vista Firewall for IT Professional (Version 1.0)
- Guidance for Securing Microsoft Internet Explorer 7 for IT Professionals (Version 1.0)

Sincerely,

Einar Mykletun, Ph.D.
Security and Compliance Architect, R&D
